

CANINE REHABILITATION

559-436-4444

Physical therapy is common for people for the management of neuromusculoskeletal conditions, neurologic disorders and post surgical recovery.

We are now starting to see that pets also can benefit from physical therapy principles. Pets share many of the same problems with humans such as knee ligament tears, fractures, paralysis, spinal cord disorders, arthritis, strains, etc. Physical therapy is used in human medicine to return people to the fullest function possible and that is our goal for pets as well. A physical therapist assist us in treatment planning and progress of pets.

The centerpiece of our rehabilitation center is an underwater treadmill. The buoyancy of the water helps reduce the weight bearing on affected bones and joints, yet allows those muscles to go through a complete active range of motion that allows for stretching and strengthening.

Some rehabilitation indications:

- Post surgical recovery
- Orthopedic injuries/surgeries
- Neurological and spine conditions
- Muscle injury
- Joint injuries and arthritis
- Weight loss
- Strength or endurance training for sport/competition dogs

Some Benefits of rehabilitation:

- Improved recovery from injury or surgery and accelerated healing processes
- Increased performance, speed and quality of movement
- Improved strength and endurance
- Minimizes secondary trauma effects of injury or surgery
- Improved biomechanics and flexibility
- Positive physiological effects for pet and owner
- Reduced pain
- Prevention of further injury
- Weight reduction for obese or arthritic dogs

Other Services:

- State of the Art Veterinary Services
- Underwater Treadmill
(1st in the Valley)
- Boarding
- Doggie Daycare
- Grooming
